The aim of this course is to give an introduction to coding theory and to sketch the ideas of algebraic geometry that led to the new result. Finally, a number of applications of these methods of algebraic geometry to coding theory are given. Since this is a new area, there are presently no references where one can find a more extensive treatment of all the material. However, both for algebraic

Introduction to Algebraic Coding Theory

Algebraic coding theory is an area of discrete applied mathematics that is concerned (in part) with developing error-control codes and encoding/decoding procedures. Many areas of mathematics are used in coding theory, and we focus on the interplay between algebra and coding theory. The topics in this packet

An introduction to coding theory for mathematics students

In this talk, intended for a general audience, I will give an introduction to coding theory. Error-control coding is the study of the efficient detection and correction of errors in a digital signal. The essential idea of so-called block codes is to divide a message into blocks of bits, then add just enough redundant bits to permit recovery of the original information after transmission
