What is the difference between mathematical modeling and

I ve done both mathematical system modeling and computer simulation. It s very powerful if you can do both on the same problem. The strength of mathematical modeling - for example, Queueing Theory, but it could be a lot of other modeling techniques - is that you get general equations and mathematical expressions for the relationships among

Difference Between Modelling and Simulation

A simulation is works on a mathematical model that describes the system. In a simulation, one or more variable of the mathematical model is changed and resulted changes in other variables are observed. Simulations enable users to predict the behavior of the real world system. As an example, behavior of a ship can be simulated using a mathematical model describes the governing laws of physics
