Modeling Chemical Reactions Kinetics COMSOL Blog

In chemical reaction engineering, simulations are useful for investigating and optimizing a particular reaction process or system. Modeling chemical reactions helps engineers virtually understand the chemistry, optimal size and design of the system, and how it interacts with other physics that may come into play.

EP0739423A1 Mesoscale polynucleotide amplification

Disclosed are devices for amplifying a preselected polynucleotide in a sample by conducting a polynucleotide amplification reaction. The devices are provided with a substrate microfabricated to include a polynucleotide amplification reaction chamber, having at least one cross-sectional dimension of about 0.1 to 1000 m. The device also

Tutorial Modeling of Chemical Reactions

Computer-Aided Drug Design Tutorials: Modeling of Chemical Reactions What Can We Learn About Reactions by Computer Modeling? The chemical reactivity of molecules is largely determined by the relative energies of reactants, products, and transition states along the minimum energy path that connects reactants and products.

Mathematical models of chemical reactions

Mathematical models of chemical reactions p. 3 The Law of Mass Action, 1.1 Chemical A and B react to produce chemical C: $A+B \xrightarrow{k} C$ The rate constant k determines the rate of the reaction. It can be interpreted as the probability that a collision between the reactants produces the end results. If we model the probability of a collision with the product $[A][B]$ we get the law of mass

Stochastic modelling of biochemical systems of multi step

Results. This work designs a two-variable model to simplify chemical events of multi-step reactions. In addition to the total molecule number of a species, we first introduce a new concept regarding the location of molecules in the multi-step reactions, which is the second variable to represent the system dynamics.

Hydrophilic hydrophobic two component polymer networks 2

The effect of the filler on the mechanical properties can be taken into account by a two-phase mechanical model, such as the models of Takayanagi¹⁶ or Kerner⁷. If Kerner's approach is used according to the treatment given by Faucheris and our previous work¹⁹, the modulus data of both series corrected for the effect of the 'filler' are represented by the same curve (Figure 8). In this
