Robust Kalman filtering extends the Kalman filtering and the extended Kalman filtering to systems that contain uncertain parameters in addition to the usual white Gaussian noise . Several examples are given, showing the robust Kalman filters outperforming the regular Kalman filter or the extended Kalman filter. Each of the first ten chapters covers a specific topic, usually with a major

standard Kalman Filter to obtain a robust Kalman Filter for uncertain systems. A useful reference on the deterministic set-valued approach to state estimation is the book [73]. In the papers [120,127,139], the results of [16] are extended to obtain a robust Kalman Filter for a class of uncertain systems: see also [85,87] for an overview of some of the recent results obtained in the area of set

Robust Kalman Filtering for Signals and Systems with Large

One of the major developments of modern control theory was the Kalman Filter and hence the development of a robust version of the Kalman Filter has become an active area of research. Although the issue of robustness in filtering is not as critical as in feedback control (where there is always the issue of instability to worry about), research on robust filtering and state estimation has

ROBUST KALMAN FILTERING FOR LINEAR DISCRETE TIME UNCERTAIN

In this paper, a robust finite-horizon Kalman filter is designed for discrete time-varying uncertain systems, basically the problem of finite horizon robust Kalman filtering for uncertain discrete-time systems is studied.

Optimal robust filtering for systems subject to uncertainties

It is shown in this paper that the use of penalty function method (Luenberger, 2003) is useful to design a recursive robust filter whose framework has a striking resemblance with the non-robust Kalman filter. In consequence, the convergence and stability analysis considered for the standard Kalman filter can be extended to the robust case.

(28) L. Xie, Y.C. Soh / Robust Kalman filtering for uncertain systems 129 Since conditions (b1) and (b2) are equivalent to condition (b) of Theorem 3.1, it follows from Remark 3.5 that for any $\epsilon \in (0, 5)$, where 5 is the supremum of 5 such that (17) admits a stabilizing solution $P > 0$, there exists a stabilizing solution to (26) such that condition (b2) holds. With the decoupled Riccati
