#### **Parabolic trough Wikipedia**

A parabolic trough is a type of solar thermal collector that is straight in one dimension and curved as a parabola in the other two, lined with a polished metal mirror.

#### **Transient models and characteristics of once through line**

This has been performed for the case of direct steam generation (DSG) in parabolic trough or linear Fresnel solar fields, in which there is a long section of two-phase flow. In the once-through mode (OTM), feed water from the power block is directed to the inlet of a loop. The water is then preheated, completely evaporated and superheated along the loop. This paper presents two different types

#### **Parabolic Troughs use Concentrated Solar Power**

Solar Parabolic Troughs uses mirrored surfaces curved in a linearly extended parabolic shape to focus solar energy on a receiver tube running the length of the trough. Water is pumped through the receiver

tube, then the water is heated as it passes through the receiver tube. The parabolic solar trough uses a mechanical slewing drive with a electronic tracker that uses a mathematical algorithm

### **Design and performance characteristics of a parabolic**

A comparison of the advantages and disadvantages of concentrating collectors against conventional flat-plate collectors are presented. This is followed by the design of a parabolic-trough solar-collector system, due consideration having been given to collector-aperture and rim-angle optimisation, together with the receiver-diameter selection.

### **Status and First Results of the DUKE Project Component**

One option to improve the cost-effectiveness and environmental friendliness of parabolic trough power plants is the utilization of water/steam in the solar field, the so-called direct steam generation (DSG). First commercial stand-alone plants using DSG are now in operation in Thailand (parabolic trough with superheating by Solarlite) and in Spain (linear Fresnel for saturated steam by Novatec Solar). To further bring down the costs of a DSG solar field, the research project DUKE aims at the

### **Solar thermal collector Wikipedia**

A solar thermal collector collects heat by absorbing sunlight. The term "solar collector" commonly refers to solar hot water panels , but may refer to installations such as solar parabolic troughs and solar towers ; or basic installations such as solar air heaters .

### **The Design and Optical Analysis of Compound Parabolic**

For various applications of solar thermal energy, the compound parabolic collector (CPC) is frequently used. To overcome the major limits of a traditional CPC, including a rapid increase in height for a larger aperture width and a low concentration ratio, a modified design was proposed in this paper.
