Thus any theory of positive systems is a special case of the theory of systems over pointed polyhedral cones. A major fact regarding pointed polyhedral cones is that they are in a way the unbounded counterpart of polytopes. In fact in the same way as we can say that a polytope is the convex extension of the set of its extreme points, we can affirm that a pointed polyhedral cone is the convex

Vector lyapunov functions and stability analysis of

duces basic Lyapunov stability theory and extends it to introduce stability concepts in terms of two different measures. Chapter Two discusses refinements of the vector Lyapunov function method, introducing the concepts of comparison systems and quasi-solutions. Chapter Three extends these techniques to differential-delay equations, integro-differential equations of Volterra type and set
