Graph theory Wikipedia

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices (also called nodes or points) which are connected by edges (also called links or lines).

Spectral distances of graphs ScienceDirect

First, we give some general results concerning the spectral distances between arbitrary graphs, and compute these distances in some particular cases. Certain relation with the theory of graph energy is identified. The spectral distances bounded by a given constant are also considered. Next, we introduce the cospectrality measure and the spectral diameter, and obtain specific results indicating
